

Installation Instructions For Drupal

1. Login into your Administrator panel and make adjustments to the settings to activate iframe on your project. Steps to do this vary depending on your version.
2. Create your page for the calculator prior to inserting the calculator shortcode.
3. Select the place where you want to display the calculator and insert the shortcode.
4. Edit the settings in the shortcode to make adjustments to page margins and height.

Shortcode Elements

```
[iframe style="margin-left: 60px"
src="http://bgservicesaz.com/YourCustomCalculator.htm"
width="100%" height="1130" onLoad="window.parent.scroll(0,0)"]
```

iframe is the plugin that controls the display. No changes needed here.

```
[iframe style="margin-left: 60px"
src="http://bgservicesaz.com/YourCustomCalculator.htm"
width="100%" height="1130" onLoad="window.parent.scroll(0,0)"]
```

Adjust the number of pixels higher or lower to center the calculator on the page.

```
[iframe style="margin-left: 60px"
src="http://bgservicesaz.com/YourCustomCalculator.htm"
width="100%" height="1130" onLoad="window.parent.scroll(0,0)"]
```

This is the calculator filename & location. Do not change this item.

```
[iframe style="margin-left: 60px"
src="http://bgservicesaz.com/YourCustomCalculator.htm"
width="100%" height="1130" onLoad="window.parent.scroll(0,0)"]
```

Adjust the height higher or lower as needed to display the full calculator on the page. Do not change the width setting.

```
[iframe style="margin-left: 60px"
src="http://bgservicesaz.com/YourCustomCalculator.htm"
width="100%" height="1130" onLoad="window.parent.scroll(0,0)"]
```

This element returns the display to the top of the page. Do not change anything in this element.
